

## Group project

The project should be a fully functional database application with defined scope. The project will include designing the system to a normalized (BCNF) database, creating the DB, importing fake data into the DB, and creating sample queries.

The project topic will be selected by the group as a whole and not the instructor. Instructor will be able to guide the group on the scope of the project but not on selecting the topic.

The Overall project will account for 20% of the grade. All students in the group are required to work equally and if someone doesn't do their share of work, instructor can adjust their marks.

Deliverables are due before the start of first class of the indicated week.

## Project deliverables and timeline

Week	Weightage	Description
<b>5</b>	5%	Project specifications due (after this, no changes are allowed unless approved by the instructor)
<b>8</b>	20%	Design documentation (ERD – Normalized to BCNF) due
<b>14</b>	25%	20 minute project presentation (this will be graded individually so everyone needs to present)
<b>14</b>	50%	Project implementation (final project due - all files + presentation)
